situation: An acoustic solution was required for the often noisy environment of a suburban pool, in particular above wading pools, spa and sauna areas. **solution:** Au.diLux ceiling panels combined with Atkar's Integrated Acoustic Backing were used to substantially cut down reverberation. Fibre cement was the ideal product to withstand the hostile mix of humidity and chlorine over an extended period of time. Au.diLux allowed the architects to specify specific sizes as well as complex curves for a perfectly integrated result. Panels were supplied raw and painted on site.
